

Prompt: (a)
Please run end-to-end simulations: set up a 2D NVT simulation for mixture of capsule and disk particles with total 500 particles. The capsule should be length 5 and diameter 0.3. Use relative volume fraction 1 for the disk. Let's test four volume fraction [0.1, 0.3, 0.5, 0.7] with sample steps 100000
